

SMART SPLICE

The Smart Splice fits inside the posts, making it quicker and easier to assemble tall posts. The Smart Splice fits the standard 60x40 posts in heights 2,200 and 3,000 mm and can extend the posts up to just over 6 meters without other attachment options.

By splicing inside the post and with only one screw to tighten to fix the joint, which saves on installation time. It also gives a more uniform impression with the splice inside and it creates a very strong solution.

Smart Splice is impact tested with our Smart Fix system and withstands an impact of 1600 joules.
