

LINEAR SLIDING DOOR

When you need a door with a clear opening height, you need our Linear Sliding Door. The design is such that no overhead track is required - therefore there is no headroom restriction. The linear sliding doors run on roller bearings at the top and bottom of the door panel, creating an opening with free access in height. The linear sliding door is built from our UX450 panels to fit your specific needs. The doors can be ordered partly pre-assembled from the factory, or as separate panels, posts and door kit for assembly on site. Standard door widths are from 2500 mm to 4250 mm and opening heights are from 2200mm to 4400 mm. Lock options are padlock, euro cylinder and assa cylinder.
