

SPARE PARTS SECURING PLATES

Troax can provide you with spare parts if an accident has occurred and the need for new securing plates is urgent. No welding is needed, only a hole to drill. The key to this solution is the insert nut, which is self-inserted into the tube by tightening of the bolt. Then the securing plate can't be loosened without first opening the door. Another spare part is the cover protection for securing plates. So, it is possible to replace the old one or just upgrade the safety of an existing door without a cover.
