

DOOR SYSTEM KIT SILENCE

To reduce the noise from slamming doors Troax offers the option of rubber damping. It is simply placed above the original doorstop to prevent the metal from touching metal when the door closes. The Door damping kit can also be added to already existing doors in UR350 and UX450 and are assembled on-site in a few seconds.

We also have a rubber damp roof fixing that is mounted into the concrete cellar ceiling which minimises noise propagation up into the building.

The third member of our family of silencers is the rubber list, which is attached to the wall fixing to minimise noise.
