

POWER DOOR

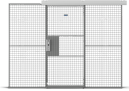

With the Troax Power door, you will get a motor solution that easily can be added on to a single sliding door in aluminium rail. When installed, the automated door can be operated in various ways thanks to multiple opening and closing possibilities. Open and close manually with buttons or signal from PLC or operate the door from a forklift using a sensor or a remote control. The motor is CE marked and TÜV certified. Comprehensive documentation for easy CE marking of the sliding door on site is included, available in many European languages. The complete add-on package contains an electric drive, a tooth rack, as well as all necessary fasteners.

FACTS

ART. NO	COMPONENTS
