

# CUT PROFILES

With the cut profile, you can quickly adjust the height or width of the panel to suit your requirements on site. Cut the panel at the desired height/width and simply attach the profile. Troax cut profiles makes it possible to modify all our different mesh panels during installation.

The profiles are available on stock in both grey and black. You can have them in any RAL colour upon request.

The height of our polycarbonate panels can also be adjusted on site.

Create a new frame by cutting the PC panel to the exact height you need, add the tape and then place the profile on top of your Polycarbonate panel. The cut profile is 1500 mm but is compatible with all standard panels from 200 – 1500 mm.

The profile is available on stock in black and can be supplied in any colour of your choice.
