

MESH PANEL FIXINGS

To provide easy access above and under the emergency stop rope, the Belt Conveyor Guarding is assembled with the panels mounted horizontally.

A hook for the emergency stop rope can be placed in the lower fixing, and the upper fixing keeps the panels in place with a turn able bracket for easy release when you want to detach the panels for service and maintenance.

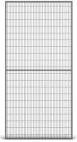

There are separate brackets for right and left ends, straight walls, ninety-degree corners and inner corners. All fixings are supplied pre-assembled, with hot dip galvanize coating to provide good corrosion protection, suitable for very harsh environments.
