

# PANIC BAR

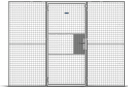

Employers always have the responsibility of creating a working environment that is safe and secure for employees. Troax can with our door with Panic bar help companies achieve this with a safety solution for exit routes. It is designed for use with hinged single doors of our mesh partitioning system. Possible door widths are 1000 mm and 1200 mm. The Panic Bar assembles onto the door in a similar way to Troax Partitioning doors fitted with Euro profile cylinder locks. The Panic Bar is CE marked in accordance with 89/106/EEC DIRECTIVE issued by ICIM and certified according to EN 1125. The door will fulfil many of the Performance Characteristics stated in both EN 1125 for panic exit devices and EN 179 for emergency exit devices.
