

# PIZZATO P-KUBE KROME

The P-KUBE Krome from Pizzato is a robust handle for machine guarding. The handle is available in chrome finish, or an illuminated white variant equipped with RGB LED lights. There is an option with an illuminated control button on the handle with various illuminated signals as well.

These handles are compatible with safety switches from the NG and NS series, featuring a high anti-bypass coding level, thanks to RFID technology actuators.

The combination reaches a safety level of PL e / SIL 3 in accordance with EN ISO 14119.

The P-KUBE Krome handle with NS- or NG switches are suitable for Troax single hinged and single sliding doors, using our bracket KIT 6390 and preferably together with the Troax Button post.
