

DOORS

Titan doors are specifically designed to complement the Titan partitioning system, offering both strength and hygiene for controlled environments.

Engineered for durability, each door features two individual trays, enhancing structural integrity while minimising dust traps to support a clean and hygienic workspace.

Doors are constructed from two steel panels securely fixed together.

Flush double glazing and glued besin infill further contribute to a seamless, high-quality finish.

As standard, each door is supplied with stainless steel hardware, flush glazing, kick strips, and a stainless steel door closer.

HINGED DOOR SPECIFICATION
