

EURO CYLINDER LOCK KNOBHANDLE

The cylinder lock with knob and handle can be opened from the outside by using a key and the lever handle on the inside can be used as a panic escape. The lock is available in two versions, both equipped with an SFF lock case, Kit 5800 comes without a deadbolt and Kit 5810 has a deadbolt with anti-panic, meaning that the door is possible to open from the inside even when it's locked with the deadbolt.

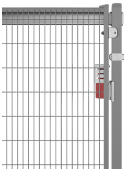

The cylinder lock is a strong metal locking tube equipped with a lock from SFF. The locking tube and the striking plate are reinforced with a welded steel cover to reduce the risk of tampering. The addition of hooks make it impossible to open the door by pulling it sideways. Choose from one of our profile cylinders, with single or double locking.

FACTS
