

SNAPPER

The Snapper is a rigid bracket that secures two panels together. One bracket is added at the top and one at the bottom of the panel and used together with bolts and nuts through the panel holes. This creates a strong solution. Use this accessory where a larger than normal distance is needed between the posts .

The snapper is painted in grey with the Troax logotype and comes in two sizes; one to fit the ST20 mesh panels and one for the ST30 mesh and polycarbonate panels.
